The BEFORE

The AFTER

Same entrance way, after a touch of Design Magic by Deb and some excellent choices by the owners!

I am always delighted how simple touches can be combined to make a space explode. Many homes built before the 90's are characterized by individual rooms that do not compliment to each other. The really good thing is most of the walls separating these room on the inside of your home tend to be non weight bearing, making opening up of your house that much easier.

Results like this can happen in your home! Call for a no obligation consult, and tell all your friends.

Next newsletter will have some exciting news about our new energy conservation program designed to save you money.

And for those of you who know Deb, well **Kasimir John Lesnefsky weighed in on Monday at 7lbs 5oz.** congrats to the new parents.
