With oil approaching \$100 per barrel, we know our electric and gas bills are NOT going down anytime soon. RENOVATIONS has teamed with Energy Savings Heating & Cooling, LLC to provide exclusively to our clients a FREE energy analysis of their current heating and cooling systems.

This analysis includes a heat loss/heat gain study of the existing and remodeled home. Results of this effort provide the basis for all options and decisions. Energy Savings Heating & Cooling will inspect:

- Existing furnace and air conditioning system
- Accessible ductwork
- Proper air supply and return
- Venting and combustion air
- Accessible gas lines
- Accessible refrigerant lines for proper sizing and insulation
- Age and EER (Energy Efficiency Rating) for the existing system

The report will provide information regarding maintenance needed and if system replacement is warranted, you will receive options on replacement systems, their Energy Efficiency Rating and the annual dollar savings you are likely to realize. **THIS IS A FREE SERVICE** to our clients and only through this newsletter for January and February of 2008.

At RENOVATIONS our goal is to be your complete remodel resource. Most folks think you need a new home or extensive remodeling to enjoy the benefits of new energy and cost saving products. That is not always the case, and we would like to help you. Please call our office to arrange for your free energy analysis.

Call us at 445-8506

And we will leave you with this really cool kitchen remodel
